

JavaScript For Beginners

Coding ko asaan banao aur pro developer ki tarah socho

Tumhara Coding Dost – Roman Urdu Guide

Welcome Mere Dost!

Coding koi mushkil kaam nahi hai! Bas mere saath 7 steps (chapters) chalo.

- Darna mana hai! 🛑
- Halki phulki examples se samjhein ge.
- Practice rozana karni hai.

❤️ "Tum slow nahi ho, tum special ho!"

JAVASCRIPT

Alerts: Choti si Cheenkh!

Real Life Example

Jaise tumhara robot dost board utha kar message dikhaye, wese hi browser `alert()` dikhata hai.

```
alert("Hello Dost!");
```

OUTPUT: Box with "Hello Dost!"

Galtiyan Jo Sab Karte Hain

⚠ Danger Zone

✗ **Alert("Hi");** -> JavaScript 'A' bara nahi bardasht karta!

✗ **alert(Hello);** -> Quotes lagana mat bhoolna mere bhai!

✓ **alert("Hello");** -> Yeh bilkul perfect hai!

Variables: Data ka Dabba

Variable ek dabba hai jisme hum data rakhte hain taake baad mein use kar sakein.

```
var name = "Ali";  
alert(name);
```

Naya Keyword: `var`

Computer ko batata hai ke "Ek naya dabba banao".

 name = "Ali"

Numbers Ke Saath Khelo

Text ke liye Quotes zaroori hain, lekin Numbers ke liye nahi!

```
var age = 20;  
var weight = 65.5;  
var total = age + 10;  
alert(total);
```

Logic:

$20 + 10 = 30$

Alert box dikhayega: 30

Dabbe ka Naam Kya Rakhein?

✓ Sahi Tareeqa (Legal)

- myVariable
- \$price
- _user
- user123

✗ Galat Tareeqa (Illegal)

- 123user (Number se shuru nahi hota)
- my variable (Space nahi chalti)
- var (JS ke keywords use nahi karne)

Math Operators (+, -, *, /, %)

```
var a = 10 % 3;  
// % ka matlab hai 'Remainder'  
// 10 ko 3 se divide karein to 1  
bachta hai.
```

+ Addition

- Subtraction

* Multiplication

/ Division

% Modulus (Bacha hua hissa)

Increment aur Decrement

Shortcuts:

`num++` matlab `num = num + 1`

`num--` matlab `num = num - 1`

Pre vs Post

num++ (Pehle dikhao, phir barhao)

++num (Pehle barhao, phir dikhao)

Operator Precedence (BODMAS)

JavaScript kisko pehle solve karega?

```
var result = 1 + 3 * 4;  
// result is 13 (Multiplication  
pehle)
```

```
var result = (1 + 3) * 4;  
// result is 16 (Brackets pehle)
```

Rule: Brackets () > Multiplication/Division > Addition/Subtraction

Coding Dost Special Advice

"Dost, agar error aaye to rona nahi! Error ka matlab hai ke tum seekh rahe ho. Error ko parho, wohi tumhein solution bataye ga."

Practice Question: Ek alert banao jo tumhara naam aur age dikhaye!

Exam & Interview Mein Kya Pooch Sakte Hain?

Q: ``alert`` aur ``console.log`` mein kya farq hai?

Q: ``var`` aur ``const`` (jo aage aaye ga) mein kya farq hota hai?

Q: CamelCase kya hota hai?

Q: ``10 + "5"`` ka result kya aaye ga? (HINT: 105)

Revision in 1 Minute

- ✓ `alert()` message box dikhata hai.
- ✓ `var` dabba (variable) banata hai.
- ✓ Variable names mein space nahi honi chahiye.
- ✓ JS hamesha BODMAS rule follow karta hai.
- ✓ `num++` se 1 ka izafa hota hai.

Ab tum ek Junior JS Developer ban chuke ho! 🎉
